Assignment 1 - Proposal

The first idea is a web application to provide users with an immersive experience when searching for movies. Upon searching for a movie, the application will display a detailed introduction of the movie, including its synopsis, cast, director, release date, and genre. In addition to the textual information, the application will showcase the movie's artwork, such as posters, stills, and promotional images, giving users a visual preview of the film.

The second idea is a web application to help students determine the fastest mode of transportation to their classes on campus. By inputting the starting location and destination, users can compare travel times and routes for different transportation, including buses, trains, walking, and ride-sharing services like Uber and Lyft.
